COURSE OUTLINE

(1) GENERAL

SCHOOL	Sciences				
ACADEMIC UNIT	International Graduate Program in Biological Inorganic				
	Chemistry				
LEVEL OF STUDIES	Graduate				
COURSE CODE	1	SEMESTER 2			
COURSE TITLE	Laboratory of Spectroscopic and Physicochemical Techniques				
INDEPENDENT TEACHING ACTIVITIES if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits		WEEKLY TEACHINO HOURS	3	CREDITS	
					10
Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).					
COURSE TYPE	Scientific field				
general background,	Special background				
special background, specialised general knowledge, skills development	Specialised general knowledge				
PREREQUISITE COURSES:	No				
LANGUAGE OF INSTRUCTION	Greek / English				
and EXAMINATIONS:					
IS THE COURSE OFFERED TO	Yes				
ERASMUS STUDENTS					
COURSE WEBSITE (URL)	http://bic.chem.uoi.gr/BIC-En/spectroscopyLab-en.html				

(2) LEARNING OUTCOMES

Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

The aim of the course is to familiarize students with the physicochemical, spectroscopic and biochemical methods used in Bioinorganic Chemistry. In addition, students are taught the basic principles of instruments operation used in chemical analysis, their applications, their characteristics and uses and to evaluate their results. Students will participate in simple experimental exercises to familiarize themselves with the instruments and devices of an analytical laboratory and to consolidate their respective theoretical knowledge.

After completion of the course, students should be able to:

- know basic analytical / physicochemical methods and to choose the most appropriate method based on the properties of compounds.
- interpret spectra, identify characteristic peaks of infrared spectra and make structure and spectrum correlation.
- organize the analysis by selecting the correct method, taking into account the relevant parameters (interferences) and making the necessary calculations.
- understand the basic meanings of spectrophotometry, laws and apply them to chemical

analysis.

- understand the principle of samples preparation, protocol used, sampling patterns and samples' maintenance.
- know thermal analysis and its applications, different solutions separation methods, familiarize themselves with the corresponding chromatograms and recognize the different peaks.

General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

Search for, analysis and synthesis of data and	Project planning and management				
information, with the use of the necessary technology	Respect for difference and multiculturalism				
Adapting to new situations	Respect for the natural environment				
Decision-making	Showing social, professional and ethical responsibility and				
Working independently	sensitivity to gender issues				
Team work	Criticism and self-criticism				
Working in an international environment	Production of free, creative and inductive thinking				
Working in an interdisciplinary environment					
Production of new research ideas	Others				
The general competences that the student should have acquired and to which the subject is aimed are: Search for, analysis and synthesis of data and information and decision making Translating the theory into practice					

Production of free, creative and inductive thinking

Working independently and team work

Acquire the appropriate theoretical base to allow further education at a doctoral level (theoretical and laboratory).

(3) SYLLABUS

Introduction to optical methods of analysis. Spectroscopic and non-spectroscopic techniques. Measurement quantification techniques

Samples analysis with:

- Visible ultraviolet spectrophotometry (Vis-UV), organology and applications
- Infrared spectroscopy (FT-IR), structure identification and identification of chemical compounds, organology.
- Nuclear magnetic resonance (NMR)
- Fluorimetry, organology and applications.
- Atomic Spectroscopy: Atomic Absorption Spectroscopy.
- Polosimetry, refractometry.
- Mass Spectroscopy (MS).
- Magnetic nuclear resonance (NMR) spectroscopy: organology and applications.

Laboratory Part of Course

- Visible spectrophotometry
- Ultraviolet spectrophotometry
- Infrared spectroscopy
 - Fluorimetry

•

• Atomic spectroscopy

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY	Face to face	
Face-to-face, Distance learning, etc.		
USE OF INFORMATION AND	E-mail, PowerPoint	
COMMUNICATIONS TECHNOLOGY		
Use of ICT in teaching, laboratory education,		
communication with students		
communication with students		
TEACHING METHODS	Activity	Semester workload
TEACHING METHODS The manner and methods of teaching are	Activity Lectures	Semester workload
TEACHING METHODS The manner and methods of teaching are described in detail.		
TEACHING METHODS The manner and methods of teaching are	Lectures	130

workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc. The student's study hours for each learning activity are given as well as the hours of non- directed study according to the principles of the ECTS	preparation 	280
STUDENT PERFORMANCE EVALUATION Description of the evaluation procedure Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, concerningother Specifically-defined evaluation criteria are given, and if and where they are accessible to students.
